

## Distributor of other Softwares

### Edgecam

Edgecam is an industry standard, where CAD programming for milling, turning machines is required. With extensive 2-5 Axis milling turning strategies, Edgecam is the only solution, you may require for this purpose.

Some of the advantages are:

- It reads native data across CAD system avoiding data translation time.
- Market leader in CAM system for NC parts – trained manpower is easily available.
- Easy to use even for complex and sophisticated tool path generation.
- Improved productivity and profitability through reduced material use.

### Robotics

Kuka provides both robots and systems to run them. The solutions offered are comprehensive and are often used for the following activities:

- Moving assembly line for bolting, clipping etc.
- Welding – laser/Magnetic/Spot/Friction/Arc
- Joining assembly and handling
- Loading, linking and unloading of presses
- Hemming

### Vico Constructor

It is complete tool dedicated to construction modeling application. It allow the user to visualize the construction virtually, thereby helping in identification and solving of constructability and construction issues even before finalization of the design.

The tool helps in:

- Reducing/identifying the risks in construction.
- Accurate estimate of Bills of Quantity based on model
- Analysis of the progress of the project, its cost using 5D presenter.
- Organizing construction zones to avoid conflicts, thereby reducing construction schedule.

## ZWCAD

ZWCAD is a robust, reliable highly cost effective 2D CAD software. Availability of the software at reasonable price has helped in reduced piracy.

It has efficient 2D/3D drawing features with editing, dimension and aerial view facilities. Its unrivaled compatibility with Autocad and Windows operating system make it a preferred tool.

## Archicad

Archicad 13, the latest version from Graphisoft in 'Building Information Modeling'(BIM) is first of its kind solution allowing 'model based team collaboration'. The technology reduces network traffic to a minimum which results in instant and reliable data exchange.

Some of the important features are:

- No waiting time at synchronization.
- Project can be accessed through remote internet also.
- No slow down effect even if large teams are simultaneously using it.
- Server level high security of data.
- Centrally controlled user right management.
- Conflict management tools available.

## Artlantis

Paris and Art in various forms have been synonymous from time immemorial. Artlantis a 3D rendering software is a product of Advent a Paris based group. It offers innovative image and design solution for CAD professionals in the field of architecture and design. It is equally used by photographers.

Some of the advantages of its use are:

- Availability of very large virtual library of 3D parametric objects.
- Availability of parametric textures, fonts and accessories
- Create high resolution 3D rendering.

## Primavera

Primavera Project Management portfolio is the most powerful robust and easy to use solution for planning, managing and executing projects. It provides a single solution for managing any number of projects simultaneously whatever their size may be.

Some of the benefits of using Primavera have been identified as:

- Plan, schedule and control large scale project/projects
- Balance the available resources
- Monitor and visualise performance versus the plan
- Inculcate team work
- Integrate with financial management and human capital management
